

The IT 0-10 150/100-277 P67 is a 150W, constant-current, programmable and IP66/IP67 rated LED driver that operates from 90-305Vac input with excellent power factor. It is created for many lighting applications including street and area, etc. The high efficiency of these drivers and compact metal case enables them to run cooler, significantly improving reliability and extending product life. To ensure trouble-free operation, protection is provided against input surge, output over voltage, short circuit, and over temperature.

## Features

- Compact Metal Case with Excellent Thermal Performance
- Full Power at Wide Output Current Range (Constant Power)
- Adjustable Output Current (AOC) with T4T(Tuner4TRONIC)
- Isolated 1(0)-5V/1(0)-10V/PWM/Resistor/AstroDIM(Timer) Dimmable
- Dim-to-Off with Standby Power  $\leq 0.5$  W
- Adjustable Dimming Curve
- Always-on Auxiliary Power: 12Vdc, 100mA on Specific Models
- End-of-Life Indicator
- Override Dimming
- Constant Lumen
- Input Surge Protection: DM 6kV, CM 10kV
- All-Around Protection: OTP, OVP, SCP
- 5 Years Warranty

## Application

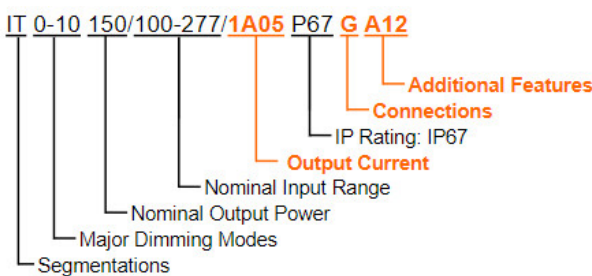

- IP66/IP67 and UL Dry/Damp/Wet Location
- TYPE HL, for use in a Class I, Division 2 Hazardous (Classified) Location
- Suitable for Luminaires with Protection Class I
- Suitable for Luminaires with Protection Class I and II on Specific Models

## Models

Adjustable Output Current Range(mA)	Full Power Current Range (mA) <sup>(1)</sup>	Default Output Current (mA)	Nominal Output Voltage Range(Vdc)	Maximum Output Power(W)	Typical Efficiency <sup>(2)</sup>	Power Factor $\lambda$		Product Name <sup>(3)(5)</sup>

## Certificates & Standards

Safety Category	Standard
UL/CUL	UL 8750, CAN/CSA-C22.2 No. 250.13
FCC Part 15	ANSI C63.4 Class B
	This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: [1] this device may not cause harmful interference, and [2] this device must accept any interference received, including interference that may cause undesired Operation.
ENEC	EN 61347-1, EN 61347-2-13, EN IEC 62384
CE	EN 61347-1, EN 61347-2-13, EN IEC 55015, EN 61547, EN IEC 61000-3-2, EN 61000-3-3

## Certificates & Standards (Continued)

Safety Category	Standard
CB	IEC 61347-1, IEC 61347-2-13
CCC	GB/T 19510.1, GB/T 19510.213, GB/T 17743, GB 17625.1
KS	KS C 7655

**Note:** (1) This product meets the requirements for IEC/EN 61347-1(Class II), when the driver is energized, the allowed leakage current is perceptible but harmless. (For the versions of luminaires with protection Class II)

(2) This LED driver meets the EMI specifications above, but EMI performance of a luminaire that contains it depends also on the other devices connected to the driver and on the fixture itself.

## Isolation Levels (For the versions of luminaires with protection Class I)

	Input	Output	Dimming	Aux	Housing
Input	N/A	Reinforced	Reinforced	Reinforced	Basic
Output	Reinforced	N/A	Reinforced	Reinforced	Basic
Dimming	Reinforced	Reinforced	N/A	N/A	Basic
Aux	Reinforced	Reinforced	N/A	N/A	Basic
Housing	Basic	Basic	Basic	Basic	N/A

## Isolation Levels (For the versions of luminaires with protection Class I and II)

	Input	Output	Dimming	Aux	EQUI
Input	N/A	Reinforced	Reinforced	Reinforced	Reinforced
Output	Reinforced	N/A	Reinforced	Reinforced	Reinforced
Dimming	Reinforced	Reinforced	N/A	N/A	Basic
Aux	Reinforced	Reinforced	N/A	N/A	Basic
EQUI	Reinforced	Reinforced	Basic	Basic	N/A

## Protection Functions

### Over Temperature Protection(OTP)

Protection based on safety: decreases output current if maximum internal temperature is reached, returning to normal value after over temperature is removed.

When output current reaches 20%, switch-off until over temperature is removed.

### Driver Guard

Default setting: disabled.

Protection based on lifetime: It can be activated via T4T. Set a lower internal temperature threshold (Thermal Settings: reduce the temperature threshold by 5°C, 10°C, 15°C or 20°C) to activate the over temperature protection.

## Dimming

### Adjustable Dimming Curve

0-10V curve can be set as corresponding dimming voltage by T4T. Take the 0-10V positive logic dimming mode as an example, the recommended implementation of the dimming control is provided below:

#### Notes:

1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
2. The dimmer can also be replaced by an active 0-10V voltage source signal or passive components like zener.

The driver is protected against temporary overheating by automatically reduction of the output current.

### Over Voltage Protection(OVP)

Limits output voltage at no load and in case the normal voltage limit fails.

### Short Circuit Protection(SCP)

Auto Recovery. No damage will occur when any output is short circuited. The output shall return to normal when the fault condition is removed.

3. When dimming voltage X point is set to be smaller than Y point, the dimming curve is positive logic; conversely, when X point is set to be bigger than Y point, the dimming curve is negative logic.
4. For best dimming accuracy, the difference between X point and Y point is advised not less than 4V.

### 1(0)-5V Dimming

The recommended implementation of the dimming control is provided below:

**Notes:**

1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
2. The dimmer can also be replaced by an active 1-5V voltage source signal or passive components like Zener.

### 1(0)-10V Dimming

The recommended implementation of the dimming control is provided below:

**Notes:**

1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
2. The dimmer can also be replaced by an active 1-10V voltage source signal or passive components like zener.

### PWM Dimming

The recommended implementation of the dimming control is provided below:

**Notes:**

1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.
2. When PWM negative logic dimming mode and Dim+ is open, the driver will dim to off and be standby.

### Resistor Dimming

The recommended implementation of the dimming control is provided below:

**Notes:**

1. Do NOT connect Dim- to the output V- or V+, otherwise the driver will not work properly.

### AstroDIM(Timer)

AstroDIM (Timer) includes 2 kinds of modes, they are Astro Based and Time Based.

- **Astro Based:** The benchmark for the dimming profile is based on the average midnight each year, which is precisely calculated using theoretical sunrise and sunset times. The LED driver strictly adheres to daily power-on and power-off times to execute the corresponding dimming configuration file. Furthermore, the adjustment of the dimming schedule is dynamic, automatically adapting according to the actual length of the night to ensure that the lighting effect aligns with nighttime environmental needs.
- **Time Based:** The dimming profile defined in the reference schedule is referenced to the switch-on time of the LED driver.
- **Override Dimming:** When the integrated "AstroDIM(Timer)+Override" is enabled, it is possible to override the dimming mode from 'AstroDIM' into 'Adjustable Dimming Curve' mode by applying a voltage of 1(0)-10V between DIM+ and DIM-. Once a voltage  $\leq 10.5$  Vdc is detected the output current will coincide with the dimming voltage. By opening the DIM+ and DIM- circuitry, the LED driver will switch again to AstroDIM mode. During override, our product continues to count while the AstroDIM is being overridden. Once the override is removed, the output current returns to the same point in its AstroDIM cycle.

### Constant Lumen

Constant lumen function may be used to maintain constant light output over the life of the LEDs by driving them at a reduced current when new, then gradually increasing the drive current over time to counteract LED lumen degradation. This function is disabled by default.

### End Of Life

End-of-Life (EOL) is providing a visual notification to a user that the LED module has reached the end of manufacturer-specified life and that the replacement is recommended. Once active, an indication is given at each power-up of the driver, which the driver indicates this through a lower light output (minimum output current level) during the first 10 minutes before normal operation is continue.

## Programming Connection Diagram

**Note:** (1) The driver does not need to be powered on during the programming process.  
 (2) Please refer to **PRG-MUL2** (Programmer) datasheet for details.  
 (3) Supports **T4T** functionality.
